

MARINE ECO FILTER - PREMIUM

55x60 cm

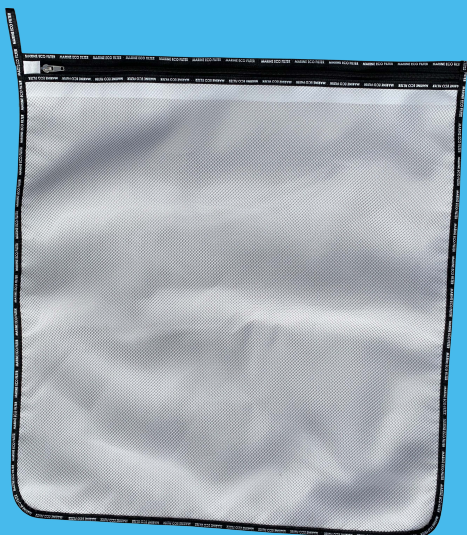

Specially designed washing net with filter. The net collects fiber remains and microplastics during machine washing.

The filter is so tightly that it keeps textile remains as small as microplastics. The fibers remain in the net and are easy to remove and throw away correctly after washing.

- Reduces release of microplastics
- Fits bag holder on cleaning trolleys
- Reduces wear and tear on textiles with up to 70%
Enhances the sustainability because it extends products' service life

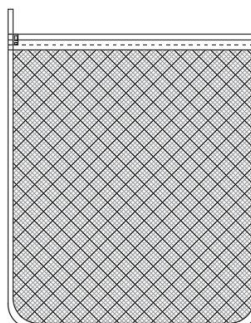

Textiles for cleaning often consist of synthetic material. Microscopic pieces of plastic are shed during wash and are released with the wastewater, which can't be cleansed properly. Therefore, microplastics end up in rivers, lakes, and the ocean.

MARINE ECO prevents that microplastics pollution in water environments.

Item no: V-5560-H
